KATHMANDU

2016

I had the pleasure of working along side Kathmandu to create a product that would enhance the camping experience. I designed and made a waterproof jacket with added weatherproof solar panels to charge small devices when needed. The jacket is made using a matte black PVC material with waterproof sealed zips making the jacket very waterproof in heavy rain conditions. There is also armpit slits with a perforated mesh exposed with a zip along the arm seam to allow for ventilation during humid climates.

Kathmandu[®]

I wanted to create something that would be suitable for a remote rain forest, camping or a concrete jungle. This would allow the user to get the most out of the product instead of the occasional use it would become a everyday item.

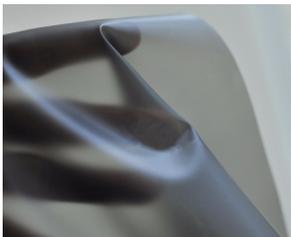

Features

- Waterproof solar panels to charge battery pack that can be used to power small devices.
- Removable thick knit lining, can be adjusted based on weather and temperature.
- Three pockets all with water proof zips
- Zipped mesh arm slits that can be opened to provide ventilation in humid climate.

CHILDREN'S TOY

2016

A children's toy that encourages out-the-box thinking with dozens of different modular shapes that can be formed.

There is one of each colour with a range of colours that are gender neutral - a unique feature in the modular toy market.

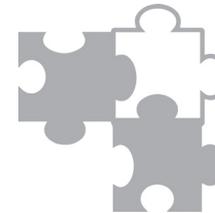

RANGE OF COLOURS

HAPPY BLOCKS

These H shaped blocks were casted from polyurethane resin making them extremely hard wearing, non toxic, easy wash, light and bouncy. Perfect for curious hands and minds!

DIY GUTTER SYSTEM

2017

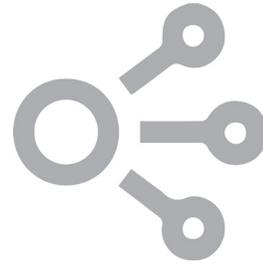

MARLEY

A simple solution to overflowing household gutter systems. The flip lid prevents debris from entering the gutter, whilst the broom attachment allowed the system to be emptied without a need for a ladder.

This project was very research heavy during the design process which lead be to finding a design that solved an issue. There was extensive 3D printing prototyping and development to trouble shoot areas through out the current Marley plumbing system and how my own designed system would co-exist alongside it.

Children live very active lives, arguably more active than adults. Within the first few years of living they are already running, jumping and playing all day everyday. I believe that the footwear they wear should support all of their adventures, whatever the weather may be.

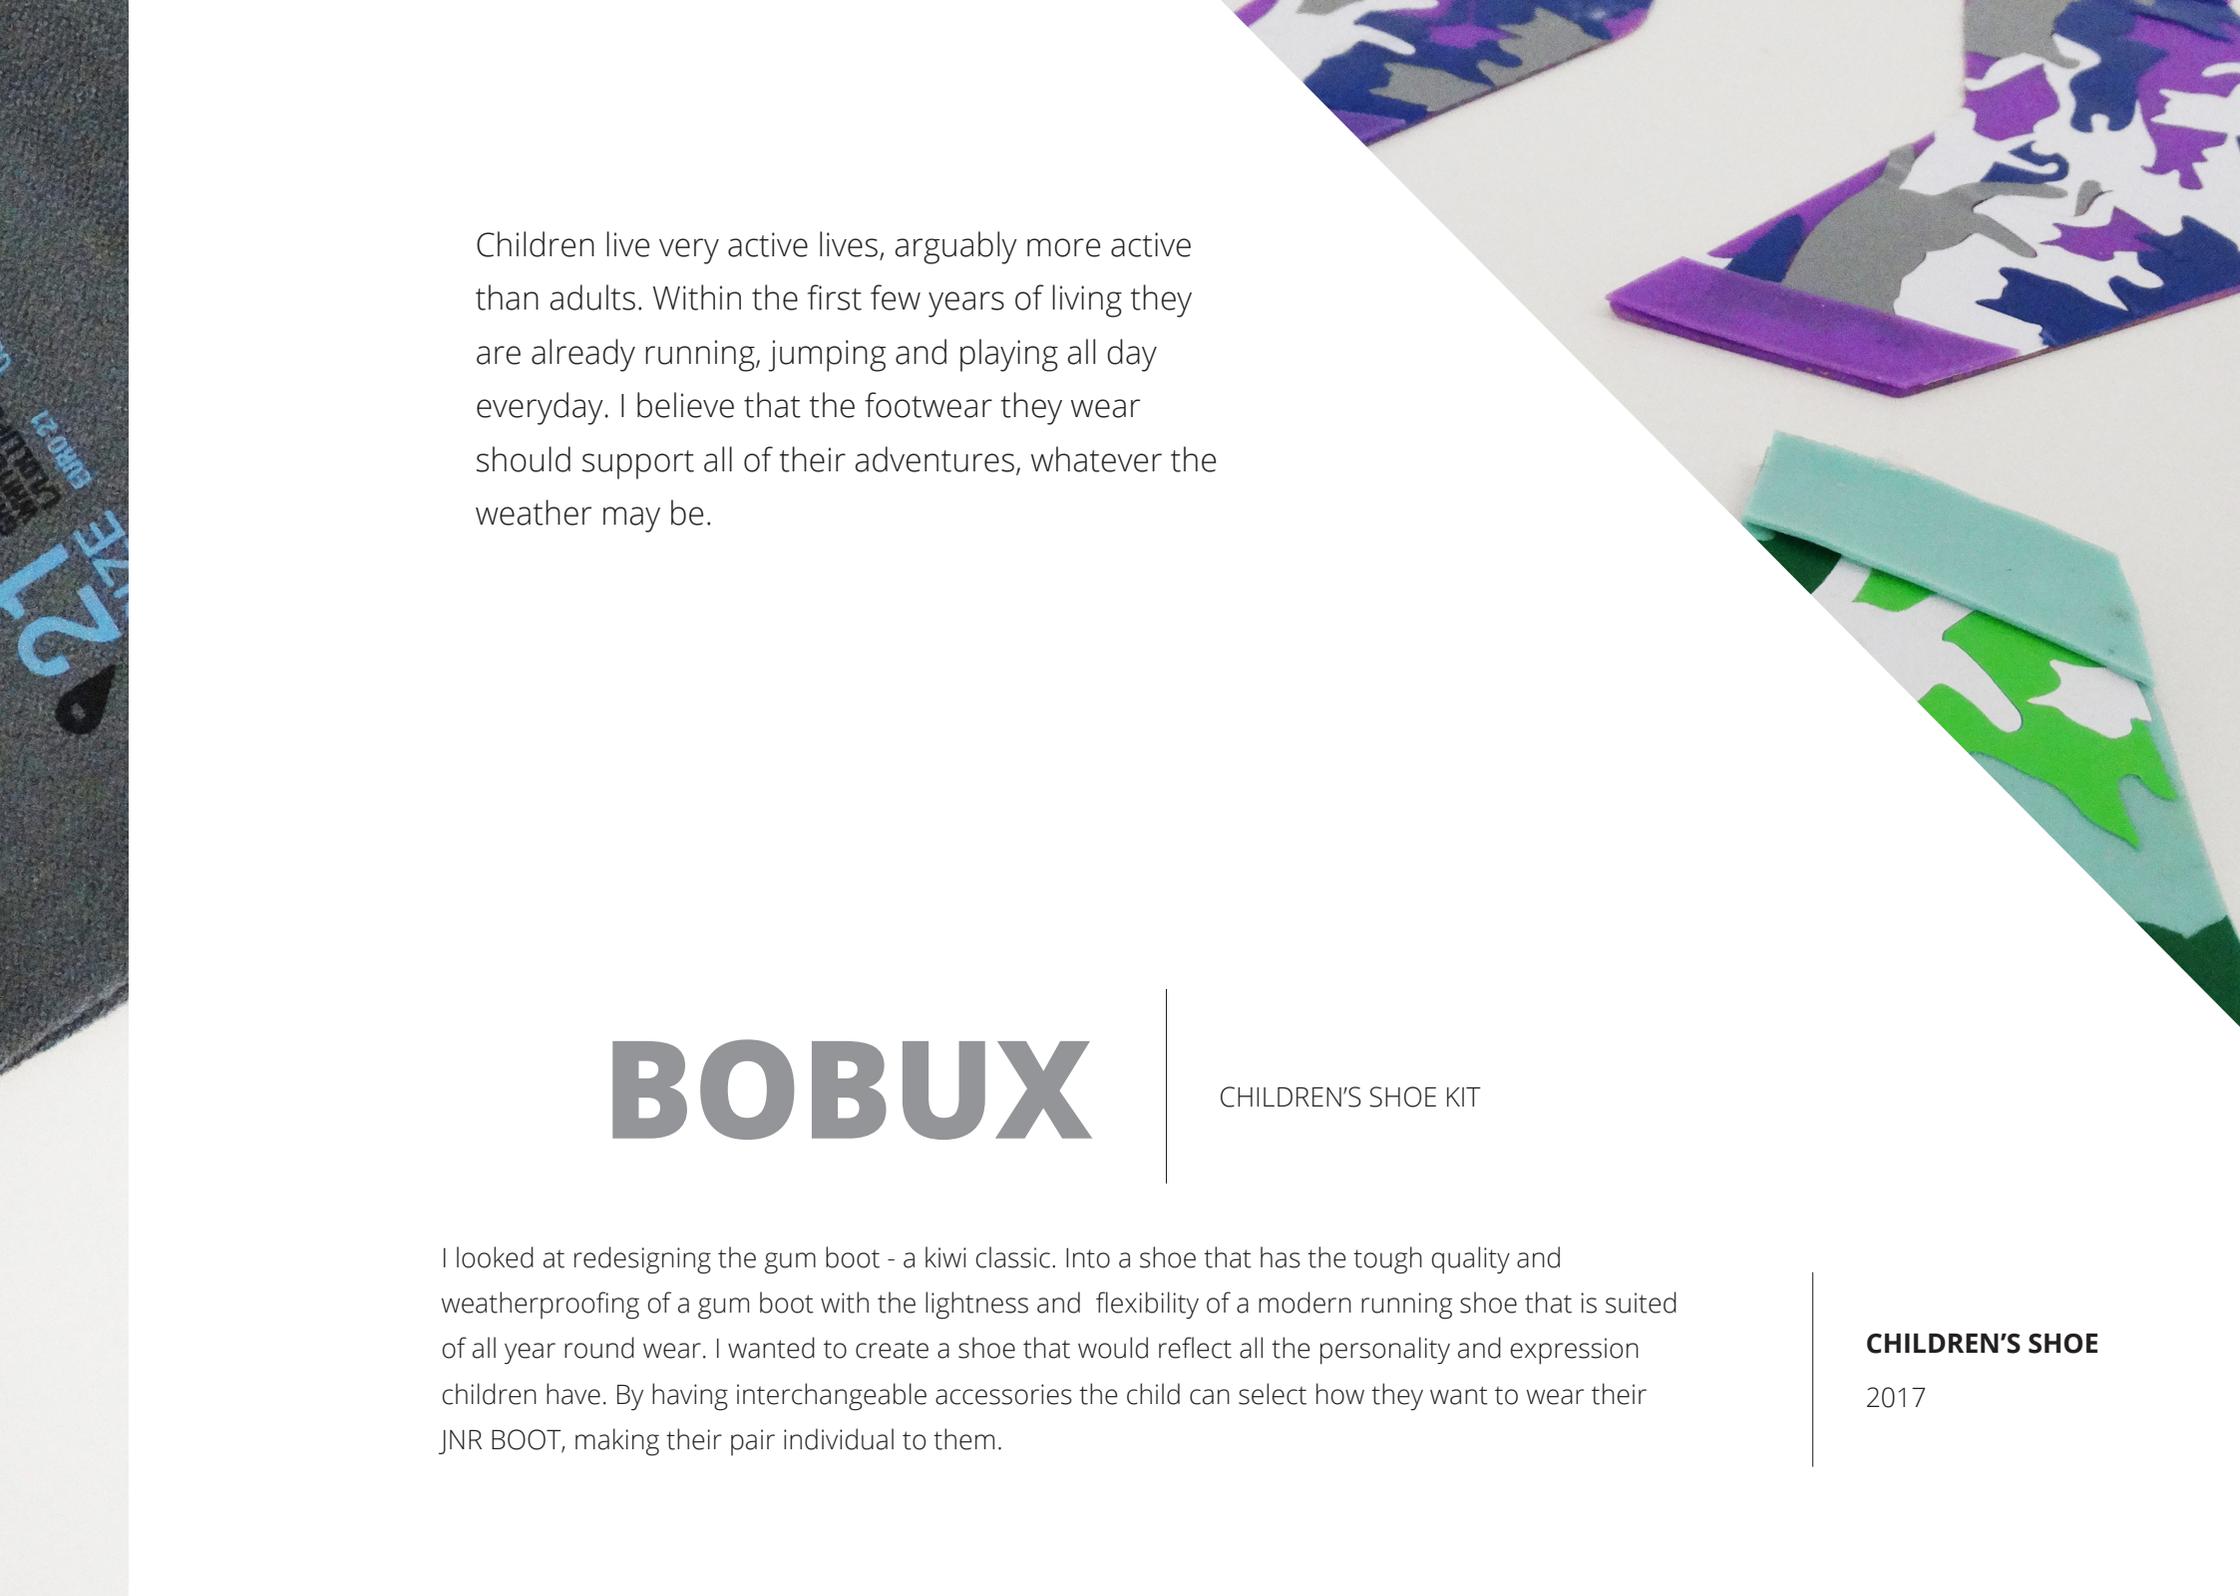

BOBUX

CHILDREN'S SHOE KIT

I looked at redesigning the gum boot - a kiwi classic. Into a shoe that has the tough quality and weatherproofing of a gum boot with the lightness and flexibility of a modern running shoe that is suited of all year round wear. I wanted to create a shoe that would reflect all the personality and expression children have. By having interchangeable accessories the child can select how they want to wear their JNR BOOT, making their pair individual to them.

CHILDREN'S SHOE

2017

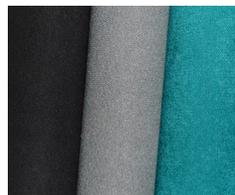

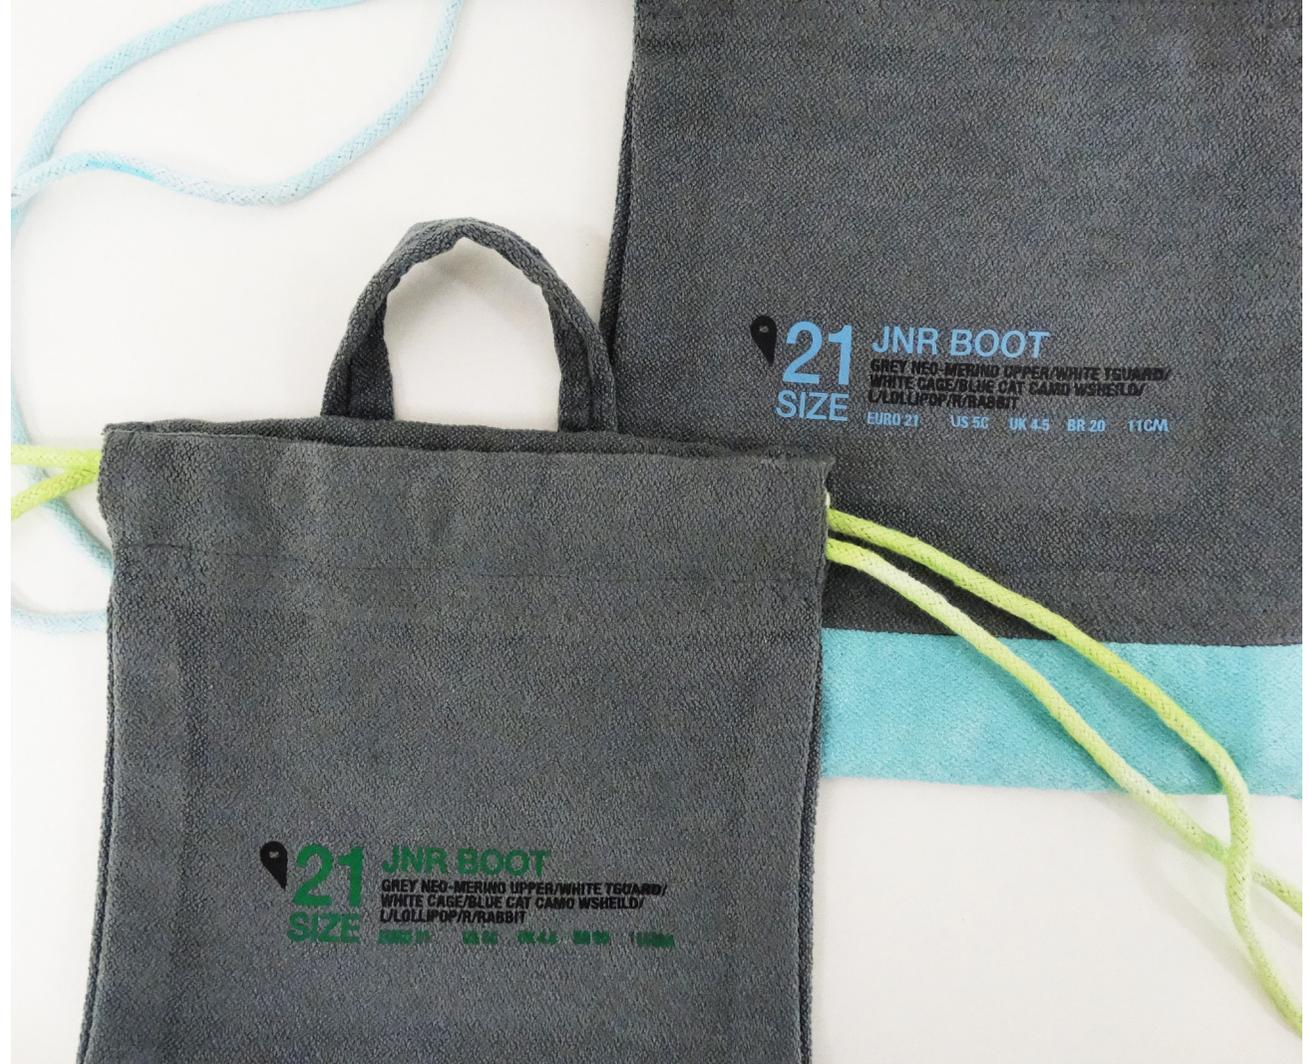

Customisable accessories that help encourage children to put the right shoe on the right foot (and the left foot on the left foot).

- Clips and innersoles for them to select to help them identify what symbols help them get ready independently as well as express their personality.

- Boot bag to keep all their interchangeable accessories in. (Bag material 40% made from recycled plastic bottles).

- Removable silicone weather guards to keep feet dry during rainy days. Can also be changed for colours/patterns to suit the wearer.
